EDUCATION

Georgia Institute of Technology

Masters of Computer Science

Fall 2026

Samford University

Bachelor of Science in Computer Science

GPA: 3.72/4.00

TECHNICAL SKILLS & CERTIFICATIONS

Languages & Frameworks: Python (Django), TypeScript/JavaScript (Astro, Svelte, React), Ruby (Rails), Go

Technologies: Docker, AWS (EC2, Lambda, Cloudwatch, S3, IAM), Azure DevOps, Git, Postman

PROFESSIONAL PROJECTS

Outdoor Leisure Wordpress Site | Wordpress CLI, ACF, SQL, PHP

- Built custom CMS with Advanced Custom Fields and modular block components, allowing clients to update page layouts independently
- Integrated Ninja Forms with custom ACF blocks to streamline content submission and user data collection

Men's Health Brand Site | Astro, Javascript, Tailwind

- Created responsive branding website using Astro's component-based architecture, allowing for quick updates based on client and designer feedback
- Developed reusable component library via Astro props to minimize future refactoring and support site expansion

PERSONAL PROJECTS

Ruby on Rails 101: CRUD

150+ views | medium.com/p/6e915c64364f

- Published Rails tutorial on Medium.com to guide readers on how to build a Rails project and create CRUD operations using the framework
- Provided example code and details on Rails Model-View-Controller architecture to assist readers

Raspberry PI Inventory App | FastAPI, PyQt6, Pydantic, Supabase, OpenAI API

- Built and hosted a Python app on a Raspberry PI 4 to manage groceries and analyze purchase data directly from my refrigerator
- Utilized Pydantic library to validate and serialize data, ensuring users only post and request valuable data
- Architected FastAPI server routes to interact directly with Supabase database, simplifying code structure and future development
- Used OpenAI's API to process data and generate potential recipe ideas according to my current inventory, improving time spent planning recipes for the week

RELEVANT EXPERIENCE

SWLLC | Software Developer

May 2025 - Present

- Handle 10+ client projects simultaneously, prioritizing tasks through weekly syncs with leadership to meet business deadlines
- Build full-stack web solutions using WordPress, modern JavaScript frameworks, and Python backend systems
- Develop and maintain Flask/SQLAlchemy backend infrastructure, creating APIs and database architectures for client applications
- Work with graphic designers and senior developers to deliver custom web solutions, incorporating feedback throughout the development process

Gunprime | Contract Developer

March 2024 - Present

- Maintaining web application using Ruby on Rails implementing MVC architecture to integrate business logic
- Building ActiveRecord models with validations, associations, and database queries to manage relational data efficiently
- Integrating on-prem Rails APIs and services, enhancing application functionality and user data usage
- Deploy 3+ AWS Lambda Python scripts with Event Scheduler to fulfill business needs

LEADERSHIP EXPERIENCE

Dawson Memorial Baptist Church | Worship Leader Assistant

January 2024 - August 2025

- Design and lead weekly worship services for a congregation of 100+ members.
- Provide audio engineering assistance to the team via the Behringer x32 soundboard

Oak Tree Ministries | Micah Fellows Intern

August 2023 - May 2025

- Serving in teen boys and elementary programs empowering Gate City community members
- Updating Square Space e-commerce website for the business division of the organization for my Micah capstone project
