EDUCATION

Samford University

Bachelor of Science in Computer Science

GPA: 3.72/4.00

TECHNICAL SKILLS & CERTIFICATIONS

Languages & Frameworks: Python (Django), TypeScript/JavaScript (Astro, Svelte, React), Ruby (Rails), Go, PHP (Laravel/WP)

Technologies: Docker, AWS (EC2, Lambda, Cloudwatch, S3, IAM), Azure DevOps, Git, Postman

RELEVANT EXPERIENCE

Scott Wehrenberg LLC | Software Developer

May 2025 - Present

- Manage 10+ client projects simultaneously, prioritizing tasks through weekly syncs with leadership to meet business deadlines
- Design and develop backend API endpoints to support client application features and business workflows
- Delivered end-to-end feature implementations based on client requirements, ensuring alignment between backend logic and user-facing interfaces
- Work with graphic designers and senior developers to deliver custom web solutions, incorporating feedback throughout the development process

Gunprime | Software Developer

March 2024 - January 2026

- Led development of RESTful API endpoints powering various operation workflows
- Modeled relational database structures and validations to support evolving business requirements
- Established 3 deployment workflows for scheduled AWS Lambda functions supporting internal operations

Samford University | Information Security Analyst Intern

Aug 2023 - April 2024

- Developed IT Security's Removal of Peripheral Devices Proposal project to present to Samford board of trustees
- Tested various virus scans in Ubuntu and documented what is necessary for our security procedures
- Learned how to navigate security patching and alert software such as Sophos, Arctic Wolf, and Tenable

PROFESSIONAL PROJECTS

Men's Health Brand Site | Astro

- Created responsive branding website using Astro's component-based architecture, allowing for quick updates based on client and designer feedback
- Developed reusable component library via Astro props to minimize future refactoring and support site expansion

Slider NPM Package | CSS & Javascript

- Developed a reusable content carousel UI component with minimal JavaScript, leveraging CSS for performance and simplicity
- Published to npm for streamlined installation and version-controlled feature deployment
- Implemented across 2 professional branding

PERSONAL PROJECTS

Ruby on Rails 101: CRUD | medium.com/p/6e915c64364f

- Published Rails tutorial on [Medium.com](https://medium.com/p/6e915c64364f) (150+ views) to guide readers on how to build a Rails project and create CRUD operations using the framework
- Provided example code and details on Rails Model-View-Controller architecture to assist readers

Raspberry PI Inventory App | FastAPI, PyQt6, Pydantic, Supabase, OpenAI API

- Built and hosted a Python app on a Raspberry PI 4 to manage groceries and analyze purchase data directly from my refrigerator
- Utilized Pydantic library to validate and serialize data, ensuring users only post and request valuable data
- Architected FastAPI server routes to interact directly with Supabase database, simplifying code structure and future development
- Used OpenAI's API to process data and generate potential recipe ideas according to my current inventory, improving time spent planning recipes for the week
